PR NOTICE 2004-1

**NOTICE TO MANUFACTURERS, FORMULATORS, PRODUCERS, AND
REGISTRANTS OF PESTICIDE PRODUCTS**

ATTENTION: Persons Responsible for the Registration of Pesticides

SUBJECT: Change of address for personal and courier deliveries to the Office of Pesticide Programs

PR Notice 2000-4, issued April 25, 2000, provides instructions for submitting various types of applications or other submissions to the Office of Pesticide Programs. That notice describes how U.S. Postal Service and courier deliveries are to be addressed for most efficient delivery and to facilitate Agency processing. This notice is available on the pesticides website at http://www.epa.gov/PR_Notices. Except as noted below, this PR Notice remains current and effective.

Effective June 26, 2004, the street address of the Office of Pesticide Programs (OPP) of the Environmental Protection Agency will change. **OPP is not changing its physical location; our offices are still located in Crystal Mall 2, across from the Crystal City Metro station.** However, due to reconfiguring of the Crystal City area streets, Arlington County has changed the street address of our Crystal City building.

This change affects personal and courier delivery services only. The U.S. Postal Service mail address will NOT change. Accordingly, when following the instructions in PR Notice 2000-4 for personal and courier deliveries, the address line should be changed as follows:

NEW ADDRESS LINE

1801 South Bell Street
Arlington, Virginia 22202-4501

Note that the old Jefferson Davis Highway address will continue to be identifiable as the physical location of OPP for six months. However, to ensure timely receipt of your submissions, please notify those in your company who send things to the Office of Pesticide Programs, your courier services, and others who need to know. You should also make changes in your automated systems to reflect the new address. This information will also be posted on the OPP website at <http://www.epa.gov/epahome/postal2.htm>. For further information, you may contact your Product Manager.

Jim Jones, Director
Office of Pesticide Programs
